

THE KENNEL CLUB
Making a difference for dogs

Breed-Specific Health Tests (as of October 2013)

The Kennel Club, together with the British Veterinary Association, runs several clinical screening schemes, such as hip and elbow dysplasia, CM/SM and eye diseases, which enable breeders to choose and produce healthy breeding stock. Additionally, the Kennel Club runs DNA tests and schemes in conjunction with breed clubs and laboratories, some of which are recorded by The Kennel Club on The Kennel Club's Registration Database and available to view via the online tool Health Test Results Finder.

The list below displays the screening schemes and DNA tests available for each breed, along with an indication as to whether they are part of the Assured Breeder Scheme (recommended or required) and whether they are recorded on the KC Registration Database.

Please note that some of the tests and laboratories listed below are not necessarily part of official Kennel Club testing schemes.

This list is accurate at the time of publish and will be updated every six months.
